What you can learn in this session

- ❖ Choosing an appropriate test
- ❖ Ways of tabulation
- ❖ Analyzing numbers using OpenEpi
- ❖ Analyzing text using KH Coder

Health literacy as a driving force for improving access to health care: recovery after the nuclear power plant accident in Fukushima

Aya Goto, Alden Y Lai, Kimiko Ueda, Rima E Rudd

The Fukushima nuclear accident induced in people the fear of unknown health effects of radiation contamination due to confusing and often contradicting health risk messages. We developed and implemented a health literacy training workshop among local public health nurses and nursery school teachers, who are key players of community health and maternal and child health. The aim of this study is to assess the training's impact in a one-year follow up. We conducted a mail survey among participating 65 nurses and 45 teachers.

Over half of respondents in both groups continued to use learned skills one year after the workshop, which was associated with higher confidence and interest in receiving further training.

The skills gained in improving text readability and assessing readers' understanding were well applied, but skills related to relaying numeric information and paraphrasing professional terms were difficult to acquire. Currently, we are planning to upgrade and continue the workshop by focusing more on numeric information and paraphrasing of professional terms. We will continue to scale-up our health literacy initiative as a part of and beyond the disaster restorations activities in an aim to establish a health literate health system in Fukushima.

Table 1. Participants' workshop evaluation and self-evaluation of achievements toward training objectives

Statements	N(%) of 4 and 5 ^a		
	Total (N = 57)	Nurses (N = 31)	Teachers (N = 26)
Workshop evaluation			
I applied learned skills in practice.	35 (61)	21 (68)	14 (54)

35/57 = 61% (95 Confidence Interval:)

Table 2. Association of application of learned health literacy skills with workshop evaluation and self-evaluation

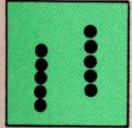

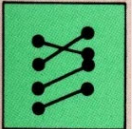

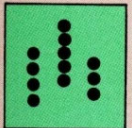

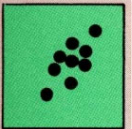

Statements	N (%) of 4 and 5 ^a		P value ^c
	Non-users (N = 22)	Users ^b (N = 35)	
Workshop evaluation			
I gained confidence in assessing and revising written materials.	2 (9)	13 (38)	0.02
I want to attend further training.	9 (41)	30 (86)	<0.001

Maternal confidence and Two-item depression score (0-2; ≥ 1 = depression tendency)

Simplifying a big table

Categorical data

1. Descriptive analysis only
2. Re-categorize into major categories
3. Re-categorize into one item of interest and others

Continuous data

1. Descriptive analysis only
2. Re-categorize into two by using
 - 1) a standard cut-off value
 - 2) mean or median or quantile value

Quick analysis using OpenEpi

<http://www.openepi.com>

Useful when...

1. You want to calculate 95%CI of a proportion.
2. You have a filled contingency table and want to perform a statistical test.
3. You know mean (SD) of your data and want to perform a statistical test.
4. You want to calculate a sample size.

Training evaluation

- ❖ Workshop evaluation surveys among participants
- ❖ 65 nurses and 45 teachers who attended workshops in 2013-2014
- ❖ At the end of each session, 1 month (nurses only) and **1 year** after the second session.
- ❖ Evaluation items
 - Application, confidence gain and interest in further training.
 - 12 specific training goals: 4 items each on knowledge, material assessment and development
 - Opinions on applications and barriers of learned skills in daily practices

Japan Medical Association Journal. 2015; 58: 1-9.
Journal of Seizon and Life Sciences. 2017; 27: 192-207.

Assignments

1. Calculate 95% confidence interval of a proportion of users. **“Proportion”**
2. Select and perform an appropriate statistical test for an association between learned skills use and building confidence. **“Two by Two” or “t test”?**
3. How do you interpret the results for further improvement of the workshop?

And more...

Please fill in a questionnaire to reflect upon your clinical experiences.

Working toward Patient-centered Care

How many years have you been working as a physician?	() years
Gender	1. M 2. F
Do you provide health service to clients/patients daily? Note. If not, no need to answer questions below.	1. Yes 2. No
Did you attend our previous courses?	1. Once 2. Multiple 3. Never (= This is the first time)

**Please think back about the last patient you have seen, and describe the situation in detail.
(Eg. A patient you have communicated just before coming to class.)**

2 What do you think the patient wanted to say the most?
